### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent Application Publication No. 2004/0203771 A1 to Chang et al.

For claim 1, Chang et al. disclose a communication system comprising:

A gateway (50) connected to a wired network (see fig. 1 and paragraph 23)

A plurality of access points associated with and controlled by the gateway (20a/20p) wherein each access point is configured to wireless communicate with and receive association requests from wireless clients for connection to the wired network through the access point (300) to send session information requests to the gateway in response to received association requests (302) and to process session information setting commands received from gateway (304)

wherein the gateway is configured to maintain session information that exists for each wireless client connected to the wired network through an access point associated with the gateway (302/304 and see abstract), the session information including a session key associated with each wireless client and an associated access point (table

Application/Control Number:

10/550,964 Art Unit: 2617

1 authentication parameter and see paragraph 39. It can be considered a session key as it comes as session information. It can be considered to be associated with client and access point as it is used to secure communication) and to respond to a session information request from a given access point by providing that access point with currently existing session information if any maintained by the gateway for the wireless client requesting association with the access point (304).

# Claim Rejections - 35 USC § 103

- 3. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Application/Control Number:

10/550,964 Art Unit: 2617

5. Claims 6 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang et al. in view of 7,062,262 to Baird.

For claim 6, claim 1 discloses all the subject matter of the claimed invention with the exception of reporting session data failure if session data does not exist.

However in an analogous art, Baird discloses reporting an error message if requested information is not found in a database (240). It would have been obvious to one of ordinary skill in the art at the time of invention to combine this teaching with that of Chang et al. by incorporating error handling into the gateway. The motivation for the combination is the use of a known technique to improve a similar device in the same way.

Claim 12 is rejected for essentially the same reason as claim 6 as it is considered implicit that the procedure of Chang et al. is implemented through a computer program.

The invention as modified by Baird would subsequently use a computer program as well.

6. Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang et al. in view of U.S. Patent Application Publication No. 2002/0046179 A1 to Kokudo.

Regarding claims 4 and 5, with Chang et al. it is not clear that this extends to traffic between the access point and gateway. However Kokudo does teach encryption being using in communication between between an access point and a gateway (paragraph 32 lines 5-6 "encrypted gateway" implies communications between access point and gateway are encrypted). Thus it would have been obvious to one of ordinary

Application/Control Number:

10/550,964 Art Unit: 2617

skill in the art at the time of invention to encrypt transmissions between the access point and gateway. The motivation for doing this is to secure communications.

7. Claims 10-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang et al. in view of Baird as applied to claim 6 and further in view of U.S. Patent Application Publication No. 2002/0046179 A1 to Kokudo.

Regarding claims 10 and 11, with Chang et al. it is not clear that this extends to traffic between the access point and gateway. However Kokudo does teach encryption being using in communication between between an access point and a gateway (paragraph 32 lines 5-6 "encrypted gateway" implies communications between access point and gateway are encrypted). Thus it would have been obvious to one of ordinary skill in the art at the time of invention to encrypt transmissions between the access point and gateway. The motivation for doing this is to secure communications.

### Response to Arguments

6. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nathan Mitchell whose telephone number is (571)270-3117. The examiner can normally be reached on M-F 8:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lester Kincaid can be reached on (571)272-7922. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
